OF THE PRODUCT

LEVEL

Level the water painting booth with a floor level tank.

The **Level** water painting booth is suitable for suctioning and demolishing the pigments and fumes emitted from paint spray made with synthetic solvents, organic water. The removal of the pigments and fumes occurs with a double frontal veil of water, nebulisers, the separation of water droplets through plastic trays and air filtration with "Paint Stop" filter drawers.

Level is built with modular panels of galvanized press-folded sheet-iron, the lower veil is openable.

The tank (excluded from the supply) must be built with a floor level gridded concrete ramp.

(notice: provisional document being completed)
