OF THE PRODUCT

PLUS

Plus the water painting booth with a water purification system.

The **Plus** water painting booth is suitable for suctioning and demolishing the pigments and fumes emitted from paint spray made with synthetic solvents, organic water. The removal of the pigments and fumes occurs with a double frontal veil of water, nebulisers, the separation of water droplets through plastic trays and air filtration with "Paint Stop" filter drawers.

The cabin **Plus** has a water purification system composed of a stainless steel filter and sacks for draining sludge.

Plus is built with modular panels of galvanized press-folded sheet-iron. The tank is constructed with stainless sheet-iron. The veils are made of galvanized pre-painted sheet-iron. The lower veil is openable.
