OF THE PRODUCT

TRIPLE

Triple the high water painting booth.

The **Triple** water painting booth is suitable for suctioning and demolishing the pigments and fumes emitted from paint spray made with synthetic solvents, organic water. The removal of the pigments and fumes occurs with a triple frontal veil of water, nebulisers, the separation of water droplets through plastic trays and air filtration with "Paint Stop" filter drawers.

The cabin **Triple** is built with modular panels of galvanized press-folded sheet-iron. **Triple** is utilized for painting elements that are over-sized. The veils are made of galvanized pre-painted sheet iron. The lower and central veils are openable.
